EFFICIENCY Introduction As in the case of other transformations of energy, in the conversion of electrical into mechanical, or vice versa, losses arise which, with dynamos and motors, are of an electrical (magnetic) and mechanical nature. The value of these losses (i.e. the determination of efficiency) is, from the reasons given in Chapter III., of great importance. Though from a commercial point of view the knowledge of the total efficiency is quite sufficient, it is very important for the designer of an electric machine to know how the total losses arising in a machine are comprised. We shall therefore not only deal with the various methods for the determination of efficiency of...
